

DATAPATH · AV PROCESSING & CONTROL

Datapath Aetria

The operating system for serious control rooms.

Aetria unifies video wall management, source distribution and operator workstations into one control-room platform — any feed to any pixel, arranged per shift and per incident, driven from the operator's seat.

PLATFORMS & ROOM FIT

Video wall management · Operator workstations · Networked sources · Control rooms & command centres · 24/7 operations

SPECIFICATIONS

Wall management	Any source to any pixel across video walls of any size — layouts saved per scenario
Operator control	Workstation-level control of the wall and sources — operators drive from the seat, not the rack
Sources	IP streams, capture, applications and cameras unified in one catalogue
Design	Purpose-built for 24/7 command environments — mining ops, security, utilities, transport

HOW FOCUS AV DEPLOYS IT

- Designed with your operations team: source catalogue, wall behaviour and incident presets defined before hardware lands.
- Commissioned alongside operator consoles, KVM and the room's environment — then supported like the infrastructure it is.
