IKUSI Flow Smart Headend

The smart headend that speaks both coax and IP.

IKUSI Flow turns any mix of TV sources — satellite, free-to-air, HDMI — into any mix of outputs, feeding IPTV and traditional coax networks from one modular rack unit. No annual licences, no drama.

PLATFORMS & ROOM FIT

IPTV · MATV / coax · Hospitality TV · Hotels & accommodation · Aged care · Commercial buildings

SPECIFICATIONS

Architecture	Modular smart headend — plug-in modules for satellite, terrestrial and HDMI inputs, scaled to your channel count
Outputs	IPTV and coax (DVB-T/C) simultaneously — one headend can feed a modern IP network and legacy TV wiring at once
Licensing	No annual licence fees — you own the system outright
Management	Self-configuring web interface; the headend detects modules and guides setup
Density	High-density 19" rack design — a full multi-source headend in minimal rack space
Content protection	Built-in DRM support for protected hospitality content

HOW FOCUS AV DEPLOYS IT

- We survey your existing distribution first — sometimes the coax is worth keeping, and Flow lets us modernise the headend without rewiring the building.
- Channel lineup engineered and balanced across both IP and coax outputs, with DRM configured where hospitality content requires it.
- Documented, labelled and supported — with the upgrade path to full IPTV already built into the same rack.
